

## Some information about master FAME report and defense:

Dealing with the **report**, we expect a Master 2 level report. A standard report usually presents a structure as follows:

- Introduction / Context / Literature review
- Experimental procedures and equipments or/and Modelling conditions
- Results / Discussions

*The main goal in this part is to establish correlations between:*

- elaboration conditions and characterization measurements,*
- results from different characterization techniques (physical, chemical, electrical, mechanical,...),*
- modelling and characterization results,*
- etc*
- Conclusion / Outlook, Future prospects
- Literature references (these pages **MUST BE AS PERFECT AS POSSIBLE**: anybody should be able to access to the quoted article from the given references)
- Appendix

The report should display around 40 pages (50 pages at maximum).

We usually expect the report to be given to Joelle Meler two weeks before the defense. You must give at least a paper version of your report to each member of your jury.

Dealing with the **oral defense**, you'll get 25 minutes to present your work (PowerPoint presentation) and 15-20 minutes for questions. We also expect a Master 2 level presentation and the requirements are similar to the ones for the report.
